color more or less at  
Watauga Lake.

*Lachesis* species, ground color  
dark tan. Posterior region  
apothic portion black  
spotted, dark project  
black band extending along  
sides of brachial region (as  
in *apiculifer*) Walter not  
present. - Ventral of black  
band a light cream one  
parallel to it running  
entire length of ca space.  
Abdomen olive green, all  
portions outlined in bright  
red; dorsal line green above,  
fingers tipped with light  
red; black spot at base  
of caudal, below cream,  
tuberculate base of  
caudal scarlet. Proximal  
on tubercle a dark green  
spot.

*Lamachus* -

Basal color dark tan;  
straw brown above; lighter  
on sides of head and region  
light cream band in  
caudal region; continuing  
down abdomen to tips of  
end of last segment of  
caudal margin of each  
abdominal segment edged  
with red. Chelae as in  
*Japonia* species
